ECON GEEK TURNED PRODUCT LEAD

PROFILE

Founded and designed WarpMeta, an organization managing competitive esports tournaments. 4+ years experience managing product design, requirements, development, and implementation. I personally hired and managed a team of engineers, designers for webpages, while personally creating wireframes for the website. I led the charge scaling the platform to over 1,000 active gamers. I'm especially interested in esports/gaming, as well as education and media.

EXPERIENCE

CEO/FOUNDER

WarpMeta (2016 - Present)
- Managed small team of developers, worked with designers to achieve user requirements
- Defined scope of projects based on design objectives
